Subject Name: Sports Injury Management
Subject Code: MSTS221

SECTION 1 – GENERAL INFORMATION

Award/s: Bachelor of Health Science (Myotherapy)
Total course credit points: 96
Level: 2nd Year
Duration: 1 Semester
Subject Coordinator: Stacey Mahboub (Brisbane campus)
Subject is: Core
Subject Credit Points: 2

Student Workload:

<table>

Delivery Mode:
Face to face: 1 x 3 hour practical

Intensive Delivery Details:
Contact hours are delivered over five weeks with 2 x 4 hour days delivered per week.
Assessment:
- Oral presentation - Week 3
- Final written and practical exams - Week 6

Pre-requisites: MSTN121, MSTA212
Co-requisites: Nil
Special Resource Requirements:
- 1 bath-sheet sized towel per student (Clinic towels must not be used)
- Myofascial release balm

SECTION 2 – ACADEMIC DETAILS

Subject Rationale
This subject provides students with the theoretical understanding of common acute and chronic sports injuries, such as sprains, strains, fractures and tendinopathies. In addition, students will be provided with the practical skills needed to examine and treat these conditions. Treatments taught include, but are not limited to, cryotherapy, thermotherapy, taping, trigger point pressure release, proprioceptive neuromuscular facilitation and other soft tissue techniques.

Learning Outcomes

1. Comprehend biomechanics and pathomechanics that are commonly seen in sports.
2. Summarise common injuries and technique concerns seen in tennis, swimming, diving, cycling, weightlifting, track and field, running, cricket, rowing, football, rugby, gymnastics and ballet.
3. Demonstrate the ability to treat the injured athlete with specific myotherapy interventions and appropriate modalities including cryotherapy, thermotherapy and RICER.
4. Describe the benefits of taping and demonstrate capabilities for safe and effective taping strategies.
5. Demonstrate examination of the injured athlete in relation to signs, symptoms and history of common sports injuries.
Assessment Tasks

</table>
| 1.   | **Introduction to sports medicine, taping and spray and stretch**  
The sports medicine team  
Biomechanics and pathomechanics seen in sport  
General examination principles and biomechanical screening used in sports medicine  
Principles and application of taping techniques including rigid and kinesiology taping  
Evidence for taping (journal article review)  
Principles and application of spray and stretch |
| 2.   | **Examination of common sports related shoulder injuries**  
Common sports related shoulder injuries  
Development of psychomotor skills with a focus on orthopaedic examination of the shoulder and interpretation of clinical findings |
| 3.   | **Treatment and rehabilitation of common sports related shoulder injuries**  
Development of psychomotor skills with a focus on manual therapy, taping and spray and stretch techniques for common sports related shoulder injuries  
Rehabilitation for sports related shoulder injuries  
Current evidence relating to treatment and rehabilitation (journal article review) |
| 4.   | **Examination of common sports related elbow, wrist and hand injuries**  
Common sports related elbow, wrist and hand injuries |
